Chapter 1: Network Monitoring Overview

This chapter discusses the following topics.

What is Standard Content?	5
Standard Content Packages	7
Network Monitoring Content	8
Supported Devices	8
Calculating Bytes In and Bytes Out	9

What is Standard Content?

Standard content is a series of coordinated resources (filters, rules, dashboards, reports, and so on) that address common security and management tasks. Standard content is designed to give you comprehensive correlation, monitoring, reporting, alerting, and case management out-of-the box with minimal configuration. The content provides a full spectrum of security, network, and configuration monitoring tasks, as well as a comprehensive set of tasks that monitor the health of the system.

Standard content is installed using a series of packages, some of which are installed automatically with the ArcSight Manager to provide essential system health and status operations. The remaining packages are presented as install-time options organized by category.

Standard content consists of the following:

- **ArcSight Core Security** content is installed automatically with the ArcSight Manager and consists of key resources for monitoring Microsoft Windows, firewall, IPS and IDS, NetFlow, and other essential security information.
- **ArcSight Administration** content contains several packages that provide statistics about the health and performance of ArcSight products.
 - ArcSight Administration is installed automatically with the ArcSight Manager and is essential for managing and tuning the performance of content and components.
 - ArcSight Admin DB CORR is installed automatically with the ArcSight Manager for the CORR-Engine (Correlation Optimized Retention and Retrieval) and provides information on the health of the CORR-Engine.

Note: The ArcSight Admin DB CORR content package is installed automatically when you perform a new ArcSight Manager installation. However package installation is different during upgrade. If you are upgrading your system from a previous version, check to see if the package is installed after upgrade. If the package is not installed, install it from the ArcSight Console.

- ArcSight Content Management is an optional package that shows information about content package synchronization with the ArcSight Content Management feature. The information includes a history of content packages synchronized from a primary source to multiple destinations, and any common issues or errors encountered. You can install this package during ArcSight Manager installation or from the ArcSight Console any time after installation.
- ArcSight ESM HA Monitoring is an optional package that lets you monitor systems that use the ESM High Availability Module. You can install this package during ArcSight Manager installation or from the ArcSight Console any time after installation.
- ArcSight Search Filters is installed automatically with the ArcSight Manager for use in the ArcSight Command Center. You cannot edit or use these filters in the ArcSight Console. For information about the search filters, refer to the *ArcSight Command Center User's Guide*.

Note: The ArcSight Search Filters content package is installed automatically when you perform a new ArcSight Manager installation. However package installation is different during upgrade. If you are upgrading your system from a previous version, check to see if the package is installed after upgrade. If the package is not installed, install it from the ArcSight Console.

- **ArcSight System** content is installed automatically with the ArcSight Manager and consists of three packages: ArcSight Core, ArcSight Groups, and ArcSight Networks. ArcSight Core and ArcSight Groups contain resources required for basic security processing functions, such as threat escalation and priority calculations, as well as basic throughput channels required for out-of-the-box functionality. The ArcSight Networks package contains the zones that were in the ArcSight Core package in previous releases, in addition to local and global network resources.
- **ArcSight Foundation** content (such as Cisco Monitoring, Configuration Monitoring, Intrusion Monitoring, IPv6, NetFlow Monitoring, Network Monitoring, and Workflow) provide a coordinated system of resources with real-time monitoring capabilities for a specific area of focus, as well as after-the-fact analysis in the form of reports and trends. You can extend these foundations with additional resources specific to your needs or you can use them as a template for building your own resources and tasks. You can install a Foundation during installation or from the ArcSight Console any time after installation.
- **Shared Libraries** - ArcSight Administration and several of the ArcSight Foundations rely on a series of common resources that provide core functionality for common security scenarios. Dependencies between these resources and the packages they support are managed by the Package resource.
 - Anti Virus content is a set of filters, reports, and report queries used by ArcSight Foundations, such as Configuration Monitoring and Intrusion Monitoring.
 - Conditional Variable Filters content is a library of filters used by variables in standard content report queries, filters, and rule definitions. The Conditional Variable Filters are used by ArcSight Administration and certain ArcSight Foundations, such as Configuration Monitoring, Intrusion Monitoring, Network Monitoring, and Workflow.

- Global Variables content is a set of variables used to create other resources and to provide event-based fields that cover common event information, asset, host, and user information, and commonly used timestamp formats. The Global Variables are used by ArcSight Administration and certain ArcSight Foundations.
- Monitoring Support Data content is a set of active lists that store mapping information for HTTP return status code classes, Cisco firewall syslog message types, and encoded logon types.
- Network filters content is a set of filters required by ArcSight Administration and certain ArcSight Foundations, such as Intrusion Monitoring and Network Monitoring.

Caution: The resources in the ArcSight Core Security, ArcSight Administration, ArcSight DB CORR, Conditional Variable Filters, Global Variables, and Network Filters content packages are not locked even though they manage core functionality; HP recommends that you do not delete or modify these resources unless you are an advanced user who understands fully the resources and their dependencies.

Standard Content Packages

Standard content comes in packages (.arb files) that are either installed automatically or presented as install-time options. The following graphic outlines the packages.

The ArcSight Core Security, ArcSight Administration, and ArcSight System packages at the base provide content required for basic functionality. The common packages in the center contain shared

resources that support multiple packages. The packages shown on top are ArcSight Foundations that address common network security and management scenarios.

Depending on the options you install, you will see the ArcSight Core Security, ArcSight Administration, and ArcSight System resources and some or all of the other package content.

Caution: When creating your own packages, you can explicitly include or exclude system resources in the package. Exercise caution if you delete packages that might have system resources. Make sure the system resources either belong to a locked group or are themselves locked. For more information about packages, refer to the *ArcSight Console User's Guide*.

Network Monitoring Content

The Network Monitoring content monitors the status of network throughput and network infrastructure. This content provides statistics about traffic patterns and bandwidth usage that helps you identify anomalies and areas of the network that need attention. The Network Monitoring content can help you:

- Keep the network up and running
- Ensure maximum availability of mission-critical server applications and vital network resources
- Validate the existence and availability of any network object
- Observe and detect any object in error state
- Monitor common and custom TCP/IP ports
- Evaluate network productivity and utilization of network resources
- Assess impact of changes to the network
- Track network anomaly and security vulnerabilities

Supported Devices

The Network Monitoring content is built around feeds from the ArcSight SmartConnector that collects events from Qosient Argus, which is a real-time flow monitor. It monitors all network transactions seen in a data network traffic stream. For more information about Qosient Argus, see <http://www.qosient.com/argus/>.

The Argus device detects a transaction from point A to point B and stores the information in the following Argus-specific fields:

Argus Event Field	Description
lasttime	record last time

Argus Event Field	Description
srcaddr	source IP address
dstaddr	destination IP address
sport	source port number
dport	destination port number
bytes	total transaction bytes
srcbytes	source-to-destination transaction bytes
dstbytes	destination-to-source transaction bytes

The ArcSight Argus SmartConnector maps this information to the correct fields in the ArcSight event schema, for example:

Argus Event Field	ArcSight Event Field
srcaddr	Attacker Address
dstaddr	Target Address
srcbytes	Bytes in
dstbytes	Bytes out

Calculating Bytes In and Bytes Out

One of the goals of the Network Monitoring content is to analyze how much traffic volume is coming into and going out of the network. Calculating this bandwidth usage involves keeping track of bytes in and bytes out of the network, from what sources, and at what rates.

Argus counts any request as `bytes in` and any response as `bytes out` regardless of where the requestor is located in relation to your protected network. For example, in the illustration below, Point A initiates the request to Point B, and Point C initiates the request to Point A. Both are considered by Argus to be `bytes in`.

But as a network administrator, you are also interested in traffic volume outbound *from* and inbound *to* your protected network, illustrated by the blue and red arrows in the example below.

ArcSight variables ensure that Argus byte counts for `bytes_in` and `bytes_out` correspond with the network notion of inbound traffic and outbound traffic.

To make sure that the byte counts for Argus `bytes_in` and `bytes_out` correspond with your network's notion of outbound traffic and inbound traffic, ArcSight has constructed a system of variables and filters that translate Argus `bytes_in` and `bytes_out` to traffic inbound to and outbound from your network.

The ArcSight `IncomingBytes` and `OutgoingBytes` variables take the Argus byte count of activity on the way out of the protected network and counts it as outbound traffic, and activity coming into the protected network as inbound traffic. In the A-to-B case, it considers the byte count for Argus `bytes_in` to be outbound traffic and considers the byte count for Argus `bytes_out` to be inbound traffic. The A-to-C case matches: bytes in are counted as inbound traffic, and bytes out are counted as outbound traffic.

In the example, if you add the total bytes out from the network's perspective (after the values have been normalized by the ArcSight variables), you add the byte counts for the two red arrows, in this case, $8 + 3$, or 11. And the byte total for the inbound traffic is the sum of the two blue arrows: $4 + 5$, or 9.

Chapter 2: Installation and Configuration

This chapter discusses the following topics:

Installing the Network Monitoring Package	11
Configuring the SmartConnector to Aggregate Events	12
Modeling the Network	13
Categorizing Assets	14
Configuring Rules	15
Configuring Filters	15
Ensuring Filters Capture Relevant Events	17
Configuring Notification Destinations	17
Configuring Notifications and Cases	17
Scheduling Reports	18
Configuring Trends	18

Installing the Network Monitoring Package

The Network Monitoring Foundation package is one of the standard content packages presented as install-time options. If you selected all the standard content packages to be *installed* at installation time, the packages and their resources are installed in the ArcSight Database and available in the Navigator panel resource tree. The package icons in the Navigator panel package view appear blue.

If you opted to exclude a Foundation package during ArcSight Manager installation, the package is *imported* into the Packages tab in the Navigator panel automatically, but is not available in the resource view. The package icon in the package view appears grey.

To install a package that is imported, but not installed:

1. On the Navigator panel Packages tab, navigate to the package you want to install.
2. Right-click the package and select **Install Package**.
3. In the Install Package dialog, click **OK**.
4. When the installation is complete, review the summary report and click **OK**.

The package resources are fully installed to the ArcSight Database, the resources are fully enabled and operational, and available in the Navigator panel resource tree.

To uninstall a package that is installed:

1. On the Navigator Panel Packages tab, navigate to the package you want to uninstall.
2. Right-click the package and select **Uninstall Package**.
3. In the Uninstall Package dialog, click **OK**.
4. The progress of the uninstall displays in the Progress tab of the Uninstalling Packages dialog. If a message displays indicating that there is a conflict, select an option in the Resolution Options area and click **OK**.
5. When uninstall is complete, review the summary and click **OK**.

The package is removed from the ArcSight Database and the Navigator panel resource tree, but remains available in the Navigator panel Packages tab, and can be re-installed at another time.

If you do not want the package to be available in any form, you can *delete* the package.

To delete a package and remove it from the ArcSight Console and the ArcSight Database:

1. On the Navigator Panel Packages tab, navigate to the package you want to delete.
2. Right-click the package and select **Delete Package**.
3. When prompted for confirmation, click **Delete**.

The package is removed from the Navigator panel Packages tab.

Configuring the SmartConnector to Aggregate Events

The Network Monitoring content is built around feeds from the ArcSight SmartConnector that collects events from Qosient Argus, which is a real-time flow monitor. It monitors all network transactions seen in a data network traffic stream.

To reduce the number of raw events that are sent from your network monitoring device to ArcSight, you can aggregate groups of events with the same characteristics using the `group by` option on the SmartConnector. You can perform this configuration from the ArcSight Console in the Connectors portion of the navigator panel.

For example, the attacker port (Argus `srcPort`) is often less interesting than the target port (`destPort`). If there are many events with the same target port and different attacker ports, you can aggregate the events, which combines the values that are the same, and nulls out the values that are different.

In the example below, the attacker ports are different, but the target ports, attacker IPs, and target IPs are the same for each event. In this case, the value in the attacker port column is null, and the values in the *Bytes in* column are summed.

Attacker Port	Target Port	Attacker IP	Target IP	Bytes in
3331	80	1.1.1.1	2.2.2.2	2
3332	80	1.1.1.1	2.2.2.2	3
3333	80	1.1.1.1	2.2.2.2	15
3334	80	1.1.1.1	2.2.2.2	9
NULL	80	1.1.1.1	2.2.2.2	29

This reduces the number of individual events that the system has to process, which improves performance and efficiency.

Note: The Argus administrator can perform this aggregation on the Argus device itself using a RAGATOR script and a configuration file that specifies the fields you want to aggregate, those you want to nullify, and those you want to sum.

Modeling the Network

A network model keeps track of the network nodes participating in the event traffic. Modeling your network and categorizing critical assets using the standard asset categories is what activates some of the standard content and makes it effective.

There are several ways to model your network. For information about populating the network model, refer to the *ArcSight Console User's Guide*. To learn more about the architecture of the network modeling tools, refer to the *ESM 101 guide*.

Categorizing Assets

After you have populated your network model with assets, apply the standard asset categories to activate standard content that uses these categories.

Asset Category	Description
/Site Asset Categories/ Address Spaces/Protected	<p>Categorize all assets (or the zones to which the assets belong) that are internal to the network with this asset category.</p> <p>Internal Assets are assets inside the company network. Assets that are not categorized as internal to the network are considered to be external. Make sure that you also categorize assets that have public addresses but are controlled by the organization (such as web servers) as <i>Protected</i>.</p> <p>Note: Assets with a private IP address (such as 192.168.0.0) are considered <i>Protected</i> by the system, even if they are not categorized as such.</p>
/System Asset Categories/ Criticality/High	<p>Categorize all assets that are considered <i>critical</i> to protect (including assets that host proprietary content, financial data, cardholder data, top secret data, or perform functions critical to basic operations) with this asset category.</p> <p>The asset categories most essential to basic event processing are those used by the Priority Formula to calculate the criticality of an event. Asset criticality is one of the four factors used by the Priority Formula to generate an overall event priority rating.</p>
/System Asset Categories/ Criticality/Very High	Same as /System Asset Categories/ Criticality/High

You can assign asset categories to assets, zones, asset groups, or zone groups. If assigned to a group, all resources under that group inherit the categories.

You can assign asset categories individually using the Asset editor or in a batch using the Network Modeling wizard. For information about how to assign asset categories using the ArcSight Console tools, refer to the *ArcSight Console User's Guide*.

For more about the Priority Formula and how it leverages these asset categories to help assign priorities to events, refer to the *ArcSight Console User's Guide* or the *ESM 101 guide*.

Configuring Rules

Rules trigger only if they are deployed in the *Real-Time Rules* group and are enabled. All Network Monitoring rules are deployed by default in the *Real-Time Rules* group and are enabled.

To disable a rule:

1. In the Navigator panel, go to **Rules** and navigate to the Real-time Rules group.
2. Navigate to the rule you want to disable.
3. Right-click the rule and select **Disable Rule**.

Configuring Filters

Note: If you use only Argus, you do not need to perform this procedure.

The events that trigger the Network Monitoring content are controlled by the filters in the Connector Filters group (/All Filters/ArcSight Foundation/Network Monitoring/Connector Filters).

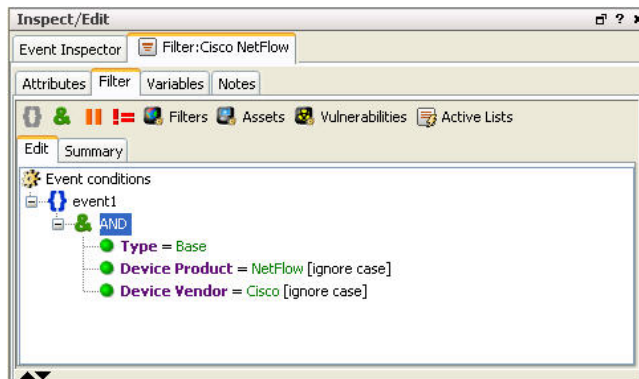

If you use a real-time flow monitoring device other than Argus, that device must also report Attacker, Target, Ports, Bytes in and Bytes out. You can then configure the SmartConnector filters to operate on events from that device.

Note: If you have multiple network reporting devices, verify that any overlapping address spaces are defined through their own ArcSight network.

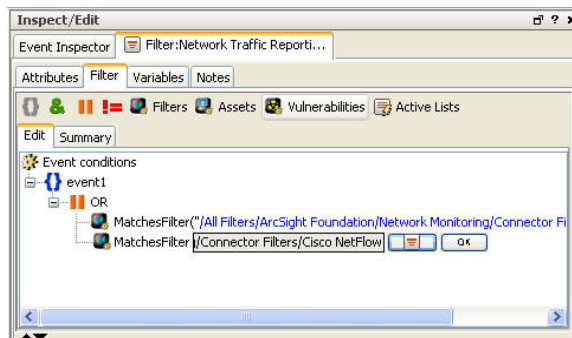

This procedure creates a new filter based on the *Qosient Argus* filter for each reporting device relevant to your network environment.

1. Copy the *Qosient Argus* filter: click and drag the filter into the same group; when prompted “Do you want to make a copy of this resource?” select **Yes**.
2. Modify the copy to reflect your network monitoring device and vendor.
 - a. Open the copy in the Inspect/Edit panel. On the Attributes tab, rename the copy to indicate the name of your network reporting device; for example, *Cisco NetFlow*.
 - b. On the Filter tab in the Event conditions window, double-click the condition *Device Product = Argus [ignore case]*. Delete *Argus* and type in the name of your device as your device reports it to the ArcSight SmartConnector; for example, *NetFlow*. Click **OK**.
 - c. In the Event conditions window, double-click the condition *Device Vendor = Qosient [ignore case]*. Delete *Qosient* and type in the name of your device as your device reports it to the ArcSight SmartConnector; for example, *Cisco*. Click **OK** in the condition. An example

is shown below.

- d. Repeat Step a through step c for each of your network monitoring devices.
 - e. Click **OK** to apply changes and close the filter editor.
Depending on how you want to organize your content, you can also express all your network reporting devices in a single filter. When adding vendors and products to the expression, add an OR clause to the event1 base.
3. Modify the Network Traffic Reporting Devices filter to point to the filter(s) you created in the previous step.
- a. Open the Network Traffic Reporting Devices filter in the Inspect/Edit panel.
 - b. On the **Filter** tab in the Event conditions window, select event1 and click the OR operator (||).
 - c. Select the first condition, MatchesFilter("/All Filters/ArcSight Foundation/Network Monitoring/Connector Filters/Qosient Argus"), and select **Copy** from the Edit menu.
 - d. Select the OR operator and select **Paste** from the Edit menu.
 - e. Double-click the second condition, MatchesFilter("/All Filters/ArcSight Foundation/Network Monitoring/Connector Filters/Qosient Argus"). Click the filter button (🗑️) and navigate to the filter you created in step 2. Click **OK**. An example is shown below.

- f. Repeat Step 3 for each network monitoring filter you want to add. If you do not have Argus, you can remove the Qosient Argus filter from the OR statement (select it and press the **Delete**

key).

- g. Click **OK** to apply changes and close the filter editor.

Ensuring Filters Capture Relevant Events

Standard content relies on specific event field values to identify events of interest. Although this method applies to most of the events and devices, be sure to test key filters to verify that they actually capture the required events.

To ensure that a filter captures the relevant events:

1. Generate or identify the required events and verify that they are being processed by viewing them in an active channel or query viewer.
2. Navigate to the appropriate filter, right-click the filter and choose **Create Channel with Filter**. If you see the events of interest in the newly created channel, the filter is functioning properly.

If you do not see the events of interest:

- a. Verify that the configuration of the active channel is suitable for the events in question. For example, ensure that the event time is within the start and end time of the channel.
- b. Modify the filter condition to capture the events of interest and apply the change.
- c. Right-click the filter and choose **Create Channel with Filter** to verify that the modified filter captures the required events.

Configuring Notification Destinations

Configure notification destinations if you want to be notified when some of the standard content rules are triggered. By default, most notifications are disabled in the standard content rules, so the admin user needs to configure the destinations *and* enable the notification in the rules.

Refer to the *ArcSight Console User's Guide* for information on how to configure notification destinations.

Configuring Notifications and Cases

Standard content depends on rules to send notifications and open cases when conditions are met. Notifications and cases are how users can track and resolve the security issues that the content is designed to find.

By default, most notifications and create case actions are disabled in the standard content rules that send notifications about security-related events.

To enable rules to send notifications and open cases, first configure notification destinations as described in "[Configuring Notification Destinations](#)" on the previous page, then enable the notification and case actions in the rules. For more information about working with Rule actions in the Rules Editor, refer to the *ArcSight Console User's Guide*.

Scheduling Reports

You can run reports on demand, automatically on a regular schedule, or both. By default, reports are not scheduled to run automatically.

Evaluate the reports that come with the content, and schedule the reports that are of interest to your organization and business objectives. For instructions about how to schedule reports, refer to the *ArcSight Console User's Guide*.

Configuring Trends

Trends are a type of resource that can gather data over longer periods of time, which can be leveraged for reports. Trends streamline data gathering to the specific pieces of data you want to track over a long range, and breaks the data gathering up into periodic updates. For long-range queries, such as end-of-month summaries, trends greatly reduce the burden on system resources. Trends can also provide a snapshot of which devices report on the network over a series of days.

Network Monitoring content includes several trends, which are disabled by default. These disabled trends are scheduled to run on an alternating schedule between the hours of midnight and 7:00 a.m. when network traffic is usually less busy than during peak daytime business hours. These schedules can be customized to suit your needs using the Trend scheduler in the ArcSight Console.

To enable a trend, go to the Navigator panel, right-click the trend you want to enable and select **Enable Trend**.

Note: To enable a disabled trend, you must first **change the default start date** in the Trend editor.

If the start date is not changed, the trend takes the default start date (derived from when the trend was first installed), and backfills the data from that time. For example, if you enable the trend six months after the first install, these trends try to get all the data for the last six months, which might cause performance problems, overwhelm system resources, or cause the trend to fail if that event data is not available.

For more information about trends, refer to the *ArcSight Console User's Guide*.

Chapter 3: Network Monitoring Content

In this section, the Network Monitoring resources are grouped together based on the functionality they provide. The resource groups are listed in the table below.

Resource Group	Purpose
"Bandwidth Usage" below	"The Bandwidth Usage resources provide information about bandwidth utilization."
"Device Activity " on page 28	"The Device Activity resources provide information about firewall, network, and VPN connection activity."
"Hosts and Protocols" on page 38	"The Hosts and Protocols resources provide information about the network traffic to the mail and web server by host and application protocol."
"SANS Top 5 Reports" on page 46	"The SANS Top 5 Reports resources provide information about suspicious or unauthorized network traffic patterns."
"Traffic Overview" on page 50	"The Traffic Overview resources provide an overview of network traffic. "

Bandwidth Usage

The Bandwidth Usage resources provide information about bandwidth utilization.

Devices

The Qosient Argus and network devices such as routers, firewalls, and VPNs can supply events that apply to the Bandwidth Usage resource group.

Bandwidth Usage Resources

The following table lists all the resources in the Bandwidth Usage group.

Resources that Support the Bandwidth Usage Group

Resource	Description	Type	URI
Monitor Resources			

Resources that Support the Bandwidth Usage Group, continued

Resource	Description	Type	URI
Argus Events	This active channel shows all the events from Argus SmartConnectors within the past eight hours.	Active Channel	ArcSight Foundation/Network Monitoring/
Inbound Bandwidth	This dashboard shows an overview of the inbound bandwidth and contains three data monitors: Inbound Bandwidth - Last 10 Minutes, Inbound Bandwidth - Last Hour, and Inbound Bandwidth - Last Minute.	Dashboard	ArcSight Foundation/Network Monitoring/Bandwidth Usage/
Current Bandwidth	This dashboard shows an overview of the current bandwidth usage and contains two data monitors: Inbound Bandwidth - Last Minute and Outbound Bandwidth - Last Minute.	Dashboard	ArcSight Foundation/Network Monitoring/Bandwidth Usage/
Outbound Bandwidth	This dashboard shows an overview of the outbound bandwidth and contains three data monitors: Outbound Bandwidth - Last 10 Minutes, Outbound Bandwidth - Last Hour, and Outbound Bandwidth - Last Minute.	Dashboard	ArcSight Foundation/Network Monitoring/Bandwidth Usage/
Top Bandwidth Hosts	This report shows a summary of bandwidth usage by top hosts. A chart shows the average bandwidth usage by host for the previous day (by default). Use this report to find hosts with the highest bandwidth.	Report	ArcSight Foundation/Network Monitoring/Operational Summaries/Bandwidth Utilization/ Cross-Device/
Bandwidth Utilization - Last Hour	This report shows the bandwidth utilization for the last hour. A chart has two sets of values. The first set shows the number of bytes per second for the inbound traffic and the second set shows the number of bytes per second for the outbound traffic.	Report	ArcSight Foundation/Network Monitoring/Operational Summaries/Bandwidth Utilization/

Resources that Support the Bandwidth Usage Group, continued

Resource	Description	Type	URI
Bandwidth Usage by Protocol	This report displays the applications that are consuming the most bandwidth. A chart shows the top ten protocols with the highest bandwidth usage. A table lists all the protocols sorted by bandwidth usage.	Report	ArcSight Foundation/Network Monitoring/Operational Summaries/Bandwidth Utilization/ Cross-Device/
Bandwidth Usage by Hour	This report shows a summary of bandwidth usage per hour. A chart shows the average bandwidth usage per hour for the past 24 hours (by default). Use this report to find high bandwidth usage hours during the day.	Report	ArcSight Foundation/Network Monitoring/Operational Summaries/Bandwidth Utilization/ Cross-Device/
Bandwidth Utilization - Business Hours	This report shows the average bandwidth utilization during business hours. The first chart shows the average bytes per second for incoming traffic and the second chart shows the average bytes per second for outgoing traffic.	Report	ArcSight Foundation/Network Monitoring/Operational Summaries/Bandwidth Utilization/
Bandwidth Utilization - Last 24 Hours	This report displays the bandwidth utilization for the last 24 hours. The first chart shows the number of bytes per second for inbound traffic and the second chart shows the number of bytes per second for outbound traffic.	Report	ArcSight Foundation/Network Monitoring/Operational Summaries/Bandwidth Utilization/
Library Resources			
Protected	This is a site asset category.	Asset Category	Site Asset Categories/Address Spaces
Outbound Bandwidth - Last Minute	This data monitor shows the outbound bandwidth (bytes/sec) for the last minute. The bandwidth values are updated every five seconds.	Data Monitor	ArcSight Foundation/Network Monitoring/Bandwidth Usage/Current Bandwidth/

Resources that Support the Bandwidth Usage Group, continued

Resource	Description	Type	URI
Outbound Bandwidth - Last Hour	This data monitor shows the average outbound bandwidth (bytes/sec) for the last hour. The values are updated every five minutes.	Data Monitor	ArcSight Foundation/Network Monitoring/Bandwidth Usage/Outbound Bandwidth/
Inbound Bandwidth - Last Minute	This data monitor shows the inbound bandwidth (bytes/sec) for the last minute. The bandwidth values are updated every five seconds.	Data Monitor	ArcSight Foundation/Network Monitoring/Bandwidth Usage/Inbound Bandwidth
Inbound Bandwidth - Last 10 Minutes	This data monitor shows the average inbound bandwidth (bytes/sec) for the last ten minutes. The values are updated every 30 seconds.	Data Monitor	ArcSight Foundation/Network Monitoring/Bandwidth Usage/Inbound Bandwidth/
Outbound Bandwidth - Last 10 Minutes	This data monitor shows the average outbound bandwidth (bytes/sec) for the last ten minutes. The values are updated every 30 seconds.	Data Monitor	ArcSight Foundation/Network Monitoring/Bandwidth Usage/Outbound Bandwidth/
Inbound Bandwidth - Last Hour	This data monitor shows the average inbound bandwidth (bytes/sec) for the last hour. The values are updated every five minutes.	Data Monitor	ArcSight Foundation/Network Monitoring/Bandwidth Usage/Inbound Bandwidth/
Argus	This field set shows a summary of the attacker and target hosts. This is the default field set for the Argus Events active channel.	Field Set	ArcSight Foundation/Network Monitoring/
Network Events	This filter identifies events with the category object starts with Network or the category device group starts with Network Equipment.	Filter	ArcSight Foundation/Common/Device Class Filters
VPN Events	This filter identifies events in which the category device group is VPN.	Filter	ArcSight Foundation/Common/Device Class Filters
External Source	This filter identifies events originating from outside the company network.	Filter	ArcSight Foundation/Common/Network Filters/Boundary Filters

Resources that Support the Bandwidth Usage Group, continued

Resource	Description	Type	URI
Application Protocol is NULL	This filter identifies if the event target has an application protocol associated with it.	Filter	ArcSight Foundation/Common/Conditional Variable Filters/Protocol
Outbound Events	This filter identifies events originating from inside the company network, targeting the outside network.	Filter	ArcSight Foundation/Common/Network Filters/Location Filters
Internal Source	This filter identifies events coming from inside the company network.	Filter	ArcSight Foundation/Common/Network Filters/Boundary Filters
All Events	This filter matches all events.	Filter	ArcSight System/Core
Internal Target	This filter identifies events targeting inside the company network.	Filter	ArcSight Foundation/Common/Network Filters/Boundary Filters
Inbound and Outbound Traffic	This filter detects Argus inbound events (external to internal) and Argus outbound events (internal to external). This filter is used by all the bandwidth-related moving average data monitors.	Filter	ArcSight Foundation/Network Monitoring/Network Traffic Filters/
Qosient Argus	This filter identifies events originating from Argus connectors.	Filter	ArcSight Foundation/Network Monitoring/Connector Filters/
Outbound Traffic	This filter detects Argus events originating inside the company network and targeting the outside network.	Filter	ArcSight Foundation/Network Monitoring/Network Traffic Filters/
Inbound Events	This filter identifies events coming from the outside network targeting inside the company network.	Filter	ArcSight Foundation/Common/Network Filters/Location Filters
External Target	This filter identifies events targeting the outside network.	Filter	ArcSight Foundation/Common/Network Filters/Boundary Filters
Firewall Events	This filter retrieves events with the Firewall category device group.	Filter	ArcSight Foundation/Common/Device Class Filters

Resources that Support the Bandwidth Usage Group, continued

Resource	Description	Type	URI
Bandwidth to or from External Systems	This filter detects events in which the source or destination of the event is internal to the network (but one of them is external), and at least one of Bytes In or Bytes Out values is present.	Filter	ArcSight Foundation/Network Monitoring/Network Traffic Filters/
Inbound Traffic	This filter identifies Argus events originating from the outside network, targeting inside the company network.	Filter	ArcSight Foundation/Network Monitoring/Network Traffic Filters/
Network Traffic Reporting Devices	This filter identifies your network traffic reporting devices. The default network traffic reporting device is QoSient Argus.	Filter	ArcSight Foundation/Network Monitoring/Connector Filters/
Bandwidth Usage by Protocol	This report shows a summary of the bandwidth usage by application protocol. A chart shows the top ten protocols with the highest bandwidth usage. A table lists all the protocols sorted by bandwidth usage.	Focused Report	ArcSight Foundation/Network Monitoring/Operational Summaries/Bandwidth Utilization/Firewall/
Bandwidth Usage per Hour	This report shows a summary of the bandwidth usage per hour. A chart shows the average bandwidth usage per hour for the previous day (by default). Use this report to find high bandwidth usage hours during the day.	Focused Report	ArcSight Foundation/Network Monitoring/Operational Summaries/Bandwidth Utilization/Firewall/
Bandwidth Usage by Protocol	This report shows a summary of network bandwidth usage by application protocol. A chart shows the top ten protocols with the highest bandwidth usage. A table lists all the protocols sorted by bandwidth usage.	Focused Report	ArcSight Foundation/Network Monitoring/Operational Summaries/Bandwidth Utilization/Network/

Resource	Description	Type	URI
Top Bandwidth Hosts	This query identifies the count of TotalBytes (Bytes In + Bytes Out) for each host, and sorts them so that the hosts with the highest totals are reported first. The query identifies events in which the Bytes In and Bytes Out fields are not empty and filters events using the Bandwidth to or from External Systems filter.	Query	ArcSight Foundation/Network Monitoring/Operational Summaries/Bandwidth Utilization/
Bandwidth Utilization - By Minute	This query returns the average number of bytes in and bytes out per second for the inbound and outbound traffic and groups the values by minute.	Query	ArcSight Foundation/Network Monitoring/Operational Summaries/Bandwidth Utilization/
Overall Traffic	This query identifies the overall number of incoming bytes and outgoing bytes. The incoming bytes are the sum of the number of bytes in requests in the inbound events (external network to internal network) and the number of bytes in responses in the outbound events (internal network to external network). The outgoing bytes are the sum of the number of bytes in requests in the outbound events (internal network to external network) and the number of bytes in responses in the inbound events (external network to internal network). This query is used by the Overall Traffic trend.	Query	ArcSight Foundation/Network Monitoring/Operational Summaries/Bandwidth Utilization/Event Queries/
Bandwidth Usage by Protocol	This query returns the count of TotalBytes (Bytes In + Bytes Out) by protocol. The query looks for events in which the Bytes In, Bytes Out, and Target Port fields are not empty, and filters events using the Bandwidth to or from External Systems filter.	Query	ArcSight Foundation/Network Monitoring/Operational Summaries/Bandwidth Utilization/

Device Activity

The Device Activity resources provide information about firewall, network, and VPN connection activity.

Devices

Network devices such as routers, firewalls, and VPNs can supply events that apply to the Device Activity resource group.

Device Activity Resources

The following table lists all the resources in the Device Activity group.

Resources that Support the Device Activity Group

Resource	Description	Type	URI
Monitor Resources			
Firewall Connection Overview	This dashboard shows an overview of all the connection events originating from firewalls.	Dashboard	ArcSight Foundation/Network Monitoring/Device Activity/
VPN Connection Statistics	This dashboard displays data monitors related to VPN servers, including connection status counts and authentication errors.	Dashboard	ArcSight Foundation/Network Monitoring/Device Activity/
Network Status Overview	This dashboard displays data monitors related to network device errors, network interfaces, and critical network events.	Dashboard	ArcSight Foundation/Network Monitoring/Device Activity/
Connections Denied by Address	This report shows denied VPN connection data. A chart summarizes the top VPN device addresses with denied connections. A table shows details of the denied connections.	Report	ArcSight Foundation/Network Monitoring/Details/Device Activity/VPN/

Resources that Support the Device Activity Group, continued

Resource	Description	Type	URI
Connections Denied by Hour	This report shows denied VPN connection data. A chart summarizes the number of denied connections for each hour. A table shows details of the denied connections by hour.	Report	ArcSight Foundation/Network Monitoring/Details/Device Activity/VPN/
Device Interface Down Notifications	This report displays the network devices that report a down link.	Report	ArcSight Foundation/Network Monitoring/Details/Device Activity/Network/
Top VPN Event Sources	This report shows event information reported by VPN devices, excluding modification events.	Report	ArcSight Foundation/Network Monitoring/Details/Device Activity/VPN/
Top VPN Event Destinations	This report shows event information reported by VPN devices, excluding modification events.	Report	ArcSight Foundation/Network Monitoring/Details/Device Activity/VPN/
Device Interface Status Messages	This report shows the network devices reporting link status changes.	Report	ArcSight Foundation/Network Monitoring/Details/Device Activity/Network/
Top VPN Access by User	This report displays information about VPN access, authorization or authentication events.	Report	ArcSight Foundation/Network Monitoring/Details/Device Activity/VPN/
VPN Connection Failures	This report displays information about VPN access where authorization or authentication failed.	Report	ArcSight Foundation/Network Monitoring/Details/Device Activity/VPN/
Authentication Errors	This report shows errors generated by a VPN connection attempt. The address is the IP address of the VPN connection source. Use this report to see which users are having difficulties using or setting up their VPN clients.	Report	ArcSight Foundation/Network Monitoring/Details/Device Activity/VPN/

Hosts and Protocols

The Hosts and Protocols resources provide information about the network traffic to the mail and web server by host and application protocol.

Devices

Qosient Argus and network devices such as routers, firewalls, and VPNs can supply events that apply to the Hosts and Protocols resource group.

Configuration

To activate content that references email and web servers, categorize your email servers with the "Email" asset category, and your web servers with the "Web Server" asset category.

Hosts and Protocols Resources

The following table lists all the resources in the Hosts and Protocols group.

Resources that Support the Hosts and Protocols Group

Resource	Description	Type	URI
Monitor Resources			
Top Traffic to Mail Server	This dashboard shows an overview of the traffic targeting internal hosts categorized as mail servers. This dashboard contains four data monitors: Top Traffic from External to Mail Server (Request), Top Traffic from External to Mail Server (Response), Top Traffic from Internal to Mail Server (Request), and Top Traffic from Internal to Mail Server (Response).	Dashboard	ArcSight Foundation/Network Monitoring/General/

Resources that Support the Hosts and Protocols Group, continued

Resource	Description	Type	URI
Traffic Moving Average	This dashboard shows a moving average of the ICMP, SYN, and UDP traffic. The dashboard contains three data monitors: Traffic Moving Average (ICMP), Traffic Moving Average (SYN), and Traffic Moving Average (UDP).	Dashboard	ArcSight Foundation/Network Monitoring/General/
Top Traffic to Web Server	This dashboard shows an overview of the traffic targeting internal hosts categorized as web servers. This dashboard contains several data monitors: Top Traffic from External to Web Server (Request), Top Traffic from External to Web Server (Response), Top Traffic from Internal to Web Server (Request), and Top Traffic from Internal to Web Server (Response).	Dashboard	ArcSight Foundation/Network Monitoring/General/
Attacker Details by Protocol	This report shows the top attackers for a specific application protocol. A chart shows the top five attackers. A table shows details of the top attackers.	Report	ArcSight Foundation/Network Monitoring/Details/By Protocol/
Detailed Traffic by Protocol	This report shows the traffic for a specific application protocol. Charts show the top five attackers and the top five targets. A table shows the top attacker-target pairs.	Report	ArcSight Foundation/Network Monitoring/Details/By Protocol/
Protocol Details by Host	This report shows the application protocol repartition for a specific host. A chart shows the top five protocols with the total number of bytes (BytesIN + BytesOUT). A table shows details for the top protocols (BytesIN, BytesOUT, and Total Number of Bytes).	Report	ArcSight Foundation/Network Monitoring/Details/By Host/

Resources that Support the Hosts and Protocols Group, continued

Resource	Description	Type	URI
Detailed Traffic by Host	This report shows a chart of the total bytes (in and out) by host, a chart of the total bytes by protocol, and a detailed table showing the bytes in, bytes out, and total bytes for each protocol by host.	Report	ArcSight Foundation/Network Monitoring/Details/By Host/
Target Details by Host	This report shows the top targets for a specific host. A chart shows the top five targets. A table shows the details of the top targets.	Report	ArcSight Foundation/Network Monitoring/Details/By Host/
Target Details by Protocol	This report shows the top targets for a specific application protocol. A chart shows the top five targets. A table shows details of the top targets.	Report	ArcSight Foundation/Network Monitoring/Details/By Protocol/

Traffic Overview

The Traffic Overview resources provide an overview of network traffic.

Devices

Qosient Argus and network devices such as routers, firewalls, and VPNs can supply events that apply to the Traffic Overview resource group.

Traffic Overview Resources

The following table lists all the resources in the Traffic Overview group.

Resources that Support the Traffic Overview Group

Resource	Description	Type	URI
Monitor Resources			
Top Inbound Traffic by Host	This dashboard shows an overview of the inbound traffic (external network to internal network) by source host. This dashboard contains the Top Inbound Traffic by Host (Request) and Top Inbound Traffic by Host (Response) data monitors.	Dashboard	ArcSight Foundation/Network Monitoring/Inbound Traffic/
Top Outbound Traffic by Application Protocol	This dashboard shows an overview of the outbound traffic (internal network to external network) by application protocol. This dashboard contains the Top Outbound Traffic by Application Protocol (Request) and Top Outbound Traffic by Application Protocol (Response) data monitors.	Dashboard	ArcSight Foundation/Network Monitoring/Outbound Traffic/

Resources that Support the Traffic Overview Group, continued

Resource	Description	Type	URI
Outbound Traffic Moving Average	This dashboard shows a moving average of the outbound traffic (internal network to external network) for the last hour. This dashboard contains the Outbound Traffic Moving Average (Request) and Outbound Traffic Moving Average (Response) data monitors.	Dashboard	ArcSight Foundation/Network Monitoring/Outbound Traffic/
Inbound Traffic Moving Average	This dashboard shows a moving average of the inbound traffic (external network to internal network) for the last hour. This dashboard contains the Inbound Traffic Moving Average (Request) and Inbound Traffic Moving Average (Response) data monitors.	Dashboard	ArcSight Foundation/Network Monitoring/Inbound Traffic/
Top Inbound Traffic by Application Protocol	This dashboard shows an overview of the inbound traffic (external network to internal network) by application protocol. This dashboard contains the Top Inbound Traffic by Application Protocol (Request) and Top Inbound Traffic by Application Protocol (Response) data monitors.	Dashboard	ArcSight Foundation/Network Monitoring/Inbound Traffic/
Top Outbound Traffic by Host	This dashboard shows an overview of the outbound traffic (internal network to external network) by source host. This dashboard contains the Top Outbound Traffic by Host (Request) and Top Outbound Traffic by Host (Response) data monitors.	Dashboard	ArcSight Foundation/Network Monitoring/Outbound Traffic/

Resource	Description	Type	URI
Traffic Statistics	This report displays the bytes in and out by hour, and bytes in and out by device. A table shows the hour, firewall zone and address, the transport protocol, and the bytes in and out.	Report	ArcSight Foundation/Network Monitoring/Operational Summaries/
Outbound Traffic by Protocol - Weekly Summary	This report shows an operational summary of the outbound traffic usage for the last week. You can specify the application protocol on which you want to focus.	Report	ArcSight Foundation/Network Monitoring/Operational Summaries/Outbound Traffic/Summaries/
Daily Traffic Summary	This report shows a daily traffic summary.	Report	ArcSight Foundation/Network Monitoring/Executive Summaries/
Inbound Traffic - Top Protocols	This report shows an operational summary of the inbound traffic usage by protocol.	Report	ArcSight Foundation/Network Monitoring/Operational Summaries/Inbound Traffic/
Quarterly Traffic Summary	This report shows an executive summary of the traffic for the last quarter, grouped by week.	Report	ArcSight Foundation/Network Monitoring/Executive Summaries/
Weekly Traffic Summary	This report shows an executive summary of the traffic for the last week, grouped by day.	Report	ArcSight Foundation/Network Monitoring/Executive Summaries/
Outbound Traffic - Weekly Summary	This report shows an operational summary of the outbound traffic usage for the last week.	Report	ArcSight Foundation/Network Monitoring/Operational Summaries/Outbound Traffic/Summaries/
Outbound Traffic - Daily Summary	This report shows an operational summary of the outbound traffic usage for the last day.	Report	ArcSight Foundation/Network Monitoring/Operational Summaries/Outbound Traffic/Summaries/
Inbound Traffic - Daily Summary	This report shows an operational summary of the inbound traffic usage for the last day.	Report	ArcSight Foundation/Network Monitoring/Operational Summaries/Inbound Traffic/Summaries/
Traffic Snapshot	This report shows the top ten protocols, top ten attackers, and top ten targets.	Report	ArcSight Foundation/Network Monitoring/Operational Summaries/

Resources that Support the Traffic Overview Group, continued

Resource	Description	Type	URI
Inbound Traffic - Weekly Summary	This report shows an operational summary of the inbound traffic usage for the last week.	Report	ArcSight Foundation/Network Monitoring/Operational Summaries/Inbound Traffic/Summaries/
Inbound Traffic - Top Source Hosts	This report shows an operational summary of the inbound traffic usage by source hosts.	Report	ArcSight Foundation/Network Monitoring/Operational Summaries/Inbound Traffic/
Outbound Traffic - Top Source Hosts	This report shows an operational summary of the outbound traffic usage by source hosts.	Report	ArcSight Foundation/Network Monitoring/Operational Summaries/Outbound Traffic/
Outbound Traffic - Top Protocols	This report shows an operational summary of the outbound traffic usage by protocol.	Report	ArcSight Foundation/Network Monitoring/Operational Summaries/Outbound Traffic/
Inbound Traffic by Protocol - Weekly Summary	This report shows an operational summary of the inbound traffic usage for the last week. You can specify the application protocol on which you want to focus.	Report	ArcSight Foundation/Network Monitoring/Operational Summaries/Inbound Traffic/Summaries/
Monthly Traffic Summary	This report shows an executive summary of the traffic for the last month.	Report	ArcSight Foundation/Network Monitoring/Executive Summaries/
Library - Correlation Resources			
TCP Traffic Spike	This rule monitors the moving average of inbound TCP events (external network to internal network). The rule triggers when the number of TCP packets per minute increases 50% or more.	Rule	ArcSight Foundation/Network Monitoring/
High Number of Denied Connections for A Source Host	This rule detects firewall deny events. The rule triggers when ten events originating from the same source host occur within two minutes.	Rule	ArcSight Foundation/Network Monitoring/

Resources that Support the Traffic Overview Group, continued

Resource	Description	Type	URI
ICMP Traffic Spike	This rule monitors the moving average of inbound ICMP events (external network to internal network). The rule triggers when the number of ICMP packets per minute increases 50% or more.	Rule	ArcSight Foundation/Network Monitoring/
High Number of Connections	This rule detects firewall accept events for MSSQL, Terminal Services, and TFTP connections (default destination ports: MSSQL=1433, Terminal Services=2289, TFTP=69). The rule triggers when ten events from the same device occur within two minutes.	Rule	ArcSight Foundation/Network Monitoring/
High Number of Denied Inbound Connections	This rule detects inbound firewall deny events. The rule triggers when 20 events from the same device occur within two minutes.	Rule	ArcSight Foundation/Network Monitoring/
SYN Traffic Spike	This rule monitors the moving average of inbound SYN events (external network to internal network). The rule triggers when the number of SYN packets per minute increases 50% or more.	Rule	ArcSight Foundation/Network Monitoring/
UDP Traffic Spike	This rule monitors the moving average of inbound UDP events (external network to internal network). The rule triggers when the number of UDP packets per minute increases 50% or more.	Rule	ArcSight Foundation/Network Monitoring/
Library Resources			
Event-based Rule Exclusions	This active list stores event information that is used to exclude specific events from one system to another system that has been determined to be not relevant to the rules that would otherwise trigger on these events.	Active List	ArcSight System/Tuning
