About This Book

This guide provides the specific events generated by the various policies and their mappings to Micro Focus ArcSight fields.

The SmartConnector for Microsoft Windows Event Log – Unified and the SmartConnector for Microsoft Windows Event Log – Native can connect to local or remote machines, inside a single domain or from multiple domains, to retrieve events from all types of event logs.

This connector supports event collection from these Microsoft Windows versions:

- Microsoft Windows Server 2008
- Microsoft Windows Server 2008 R2
- Microsoft Windows Server 2012
- Microsoft Windows Server 2012 R2
- Microsoft Windows Server 2016
- Microsoft Windows Server 2019

Note that Security events are not audited by default. Be sure to specify the type of security events to be audited (see "Enable Microsoft Windows Event Log Audit Policies" in the configuration guide for the SmartConnector for Microsoft Windows Event Log -- Native).

There are three default Windows event logs:

- Application log (tracks events that occur in a registered application)
- Security log (tracks security changes and possible breaches in security)
- System log (tracks system events)

Windows Common Security Mappings

The following security event mappings generally apply to all Windows Server 2008, Windows Server 2012, Windows Server 2016, and Windows 10 Windows Event Log Security Events. For the cases in which specific security events have differing or extended mappings, see "Specific 2008 Windows Security Event Mappings."

System	IPsec Driver	4960	IPsec dropped an inbound packet that failed an integrity check. If this problem persists, it could indicate a network issue or that packets are being modified in transit to this computer. Verify that the packets sent from the remote computer are the same as those received by this computer. This error might also indicate interoperability problems with other IPsec implementations.
		4961	IPsec dropped an inbound packet that failed a replay check. If this problem persists, it could indicate a replay attack against this computer.
		4962	IPsec dropped an inbound packet that failed a replay check. The inbound packet had too low a sequence number to ensure it was not a replay.
System	IPsec Driver	4963	IPsec dropped an inbound clear text packet that should have been secured. This is usually due to the remote computer changing its IPsec policy without informing this computer. This could also be a spoofing attack attempt.
		4965	IPsec received a packet from a remote computer with an incorrect Security Parameter Index (SPI). This is usually caused by malfunctioning hardware that is corrupting packets. If these errors persist, verify that the packets sent from the remote computer are the same as those received by this computer. This error may also indicate interoperability problems with other IPsec implementations. In that case, if connectivity is not impeded, then these events can be ignored.
		5478	IPsec Services has started successfully.
		5479	IPsec Services has been shut down successfully. The shutdown of IPsec Services can put the computer at greater risk of network attack or expose the computer to potential security risks.
		5480	IPsec Services failed to get the complete list of network interfaces on the computer. This poses a potential security risk because some of the network interfaces may not get the protection provided by the applied IPsec filters. Use the IP Security Monitor snap-in to diagnose the problem.
		5483	IPsec Services failed to initialize RPC server. IPsec Services could not be started.
		5484	IPsec Services has experienced a critical failure and has been shut down. The shutdown of IPsec Services can put the computer at greater risk of network attack or expose the computer to potential security risks.
		5485	IPsec Services failed to process some IPsec filters on a plug-and-play event for network interfaces. This poses a potential security risk because some of the network interfaces may not get the protection provided by the applied IPsec filters. Use the IP Security Monitor snap-in to diagnose the problem.
